

Commercial Low-Level Radioactive Waste Disposal Sites

The below map shows current commercial LLW disposal sites frequently used by DOE.

Energy Solutions

EnergySolutions operates a LLW disposal facility, the Clive Disposal Facility, which is licensed by the State of Utah. The Clive Disposal Facility receives Class A LLW and mixed LLW for disposal from a wide variety of generators, both commercial and the federal government.

Waste Control Specialists, LLC (WCS)

WCS, near Andrews, Texas, accepts Class A, B, and C LLW from generators within the Texas Compact (Texas and Vermont). LLW from generators outside the Texas Compact is accepted for disposal by approval of the Compact. At this site, WCS also operates the Federal Waste Facility, which accepts certain DOE LLW and mixed LLW.
