

# FY 19 Commercial Trucks and Off-road Applications FOA: Natural Gas, Hydrogen, Biopower, and Electrification Technologies

## FOA # DE-FOA-0002044

| Applicant  | Location (city, state) | Project Title  | Federal Share |
|--|------------------------|--|---------------|
| <b>1a – Advanced Storage for Gaseous Fuels</b>                   |                        |  |               |
| University of Michigan   | Ann Arbor, MI          | Optimal Adsorbents for Low-Cost Storage of Natural Gas: Computational Identification, Experimental Demonstration, and System-Level Projection        | \$1,000,000   |
| Northwestern University  | Evanston, IL           | Theory-Guided Design and Discovery of Materials for Reversible Methane and Hydrogen Storage  | \$1,000,000   |
| University of Delaware   | Newark, DE             | Methane Storage with Porous Cage-Based Composite Materials   | \$918,500     |
| Montana State University   | Bozeman, MT            | Heteroatom-Modified and Compacted Zeolite-Templated Carbons for Gas Storage  | \$874,781     |
| University of South Florida                                      | Tampa, FL              | Metal-Organic Frameworks Containing Frustrated Lewis Pairs for H <sub>2</sub> Storage at Ambient Temperature   | \$800,000     |
| Pennsylvania State University                                    | University Park, PA    | Developing New NG Super-Absorbent Polymer (NG-SAP) for a Practical NG Storage System with Low Pressure, Ambient Temperature, and High Energy Density | \$895,065     |
| University of South Florida                                      | Tampa, FL              | Uniting Theory and Experiment to Deliver Flexible MOFs for Superior Methane (NG) Storage   | \$800,000     |
| <b>1b - Waste to Energy</b>                                      |                        |  |               |
| North Carolina State University                                  | Raleigh, NC            | Renewable Natural Gas from Carbonaceous Wastes via Phase Transition CO <sub>2</sub> /O <sub>2</sub> Sorbent Enhanced Chemical Looping Gasification   | \$2,499,461   |
| Washington State University                                      | Pullman, WA            | Develop an Efficient and Cost-effective Novel Anaerobic Digestion System Producing High Purity Methane from Diverse Waste Biomass                    | \$2,234,051   |
| <b>1c - Natural Gas Vehicle Maintenance Cost Study</b>           |                        |  |               |
| Clean Fuels Ohio   | Columbus, OH           | NGV U.P.-T.I.M.E. Analysis: Updated Performance Tracking Integrating Maintenance Expenses  | \$500,000     |
| <b>1e - Smart Compressed Natural Gas Infrastructure Projects</b> |                        |  |               |
| Gas Technology Institute   | Des Plaines, IL        | Smart CNG Station Deployment   | \$1,999,789   |
| <b>1f - Next Generation CNG Driver Information Systems</b>       |                        |  |               |
| Gas Technology Institute   | Des Plaines, IL        | Next-Generation NGV Driver Information System  | \$1,000,000   |
| <b>2 - Battery Electric Heavy-duty Freight Vehicles</b>          |                        |  |               |
| Kenworth Truck Company, a PACCAR Company                         | Renton, WA             | Long-Range Class 8 Battery-Electric Vehicle with Megawatt Wireless Charging  | \$4,989,288   |
| Daimler Trucks North America LLC                                 | Portland, OR           | DTNA EMG Innovation eCascadia 2.0  | \$4,605,778   |

| <b>Applicant</b>  | <b>Location<br/>(city, state)</b> | <b>Project Title</b>  | <b>Federal<br/>Share</b> |
|---|-----------------------------------|---|--------------------------|
| Volvo Technology of America, Inc.   | Greensboro, NC                    | Improving the Freight Productivity of a Heavy-Duty, Battery Electric Truck by Intelligent Energy Management         | \$3,799,536              |
| Ricardo Inc.  | Van Buren Township, MI            | High Efficiency Powertrain for Heavy-Duty Trucks using SiC Inverter/Rectifier                                       | \$4,605,398              |
| <b>3 - High Throughput Hydrogen Fueling Technologies for Medium- and Heavy-duty Transportation</b>                                      |                                   |   |                          |
| Air Products and Chemicals, Inc.  | Allentown, PA                     | Ultra-Cryopump for High-Demand Transportation Fueling   | \$1,674,100              |
| NEL Hydrogen Inc.   | San Leandro, CA                   | High-Speed and Dynamic Diaphragm Compressor for High-Capacity Fueling   | \$2,000,000              |
| Electricore, Inc.   | Valencia, CA                      | High-Pressure, High-Flow Rate Dispenser and Nozzle Assembly for Heavy-Duty Vehicles                                 | \$2,999,037              |
| <b>4 - High-durability, Low Platinum Group Metal Membrane Electrode Assemblies (MEAs) for Medium- and Heavy-duty Truck Applications</b> |                                   |   |                          |
| General Motors LLC  | Pontiac, MI                       | Durable Fuel Cell MEA through Immobilization of Catalyst Particle and Membrane Chemical Stabilizer                  | \$1,998,518              |
| Nikola Motor Company  | Phoenix, AZ                       | Durable MEAs for Heavy-Duty Fuel Cell Electric Trucks   | \$1,700,000              |
| Carnegie Mellon University  | Pittsburgh, PA                    | Durable High Power Density Fuel Cell Cathodes for Heavy-Duty Vehicles   | \$2,000,000              |
| <b>5 - Energy Efficient Commercial Off-road Vehicles</b>  |                                   |   |                          |
| University of Wisconsin-Madison   | Madison, WI                       | Improving Efficiency of Off-Road Vehicles by Novel Integration of Electric Machines and Advanced Combustion Engines | \$2,695,296              |
| Michigan Technological University   | Houghton, MI                      | Improved Efficiency of Off-Road Material Handling Equipment through Electrification                                 | \$2,304,704              |

**Note:** No projects were selected under Topic 1d – Existing Natural Gas Vehicle Tank Affordability.
