General Comment

The Administrative procedures for the Critical Electric Infrastructure is needed. Because the cities in every state are growing rapidly, a certain policy needs to be set in placed. The world's electric infrastructure affects so many people and every area of the world, therefore all are affected. It is very much needed because some areas should not be touched. Some areas should remain rural for health reasons (pollution), water and food supply.

Our environment should be protected because of its history and location. Protecting the nations electric infrastructure is important and everyone lives depend on it. Considering all that would be impacted it. With protecting infrastructures around the world there should be the responsibility for setting obtaining goals that could be reached in a timely manner with the government, privately owned businesses and corporate companies that would depend on the private sector knowledge and action.
