

Our Top Priority: Protecting Public Health and the Environment

At the Office of Legacy Management, we implement long-term care plans that are designed to protect public health and the environment at legacy sites. The plans are site specific and comply with environmental laws and regulations. Sites that present no future radiological risk to the public are considered suitable for unrestricted use. We also maintain records and respond to public inquiries for these sites.

For sites that require long-term care, we conduct environmental monitoring and regular inspections, implement land-use restrictions, and maintain environmental protection features, such as disposal cells and groundwater treatment systems.

Preserve, Protect, and Share Records and Information

Preserving the vast collection of records generated as a result of work at legacy sites is necessary to understand these sites, document site history, and confirm that the sites were properly cleaned up. Former legacy site employees also rely on access to their occupation and health records to exercise their rights and benefits. We manage the physical and electronic records of our legacy sites, programs, and operations at the Legacy Management Business Center, a National Archives and Records Administration-certified storage facility, in Morgantown, West Virginia. Proper records management will allow us to meet outreach expectations for generations to come.

Optimize Legacy Management Land and Assets

As of 2019, the Office of Legacy Management manages approximately 49,400 acres of federal land. In some cases, legacy sites are transferred to other state and local governmental agencies or sold to private enterprises for new development. In other cases, reuse opportunities are identified and implemented at sites that we maintain. For more information on our sites, please visit www.energy.gov/lm/sites/lm-sites.

Environmental Justice

No group of people should bear an unreasonable amount of negative environmental effects due to industrial, governmental, and commercial operations or policies. Environmental justice (EJ) is an essential part of our mission, fulfilled by treating all people fairly, regardless of race, ethnicity, culture, income, or education. We encourage anyone interested in the environmental laws, regulations, and policies at legacy sites to visit our Environmental Justice webpage at www.energy.gov/lm/services/environmental-justice.

Public Involvement

Informing and educating the public about how legacy site activities may affect individuals, families, and communities are important for managing long-term care of the sites. Information about the sites we manage is available on our website at www.energy.gov/lm. Site-specific pages include fact sheets, historical documents, current reports, contact information, and the Geospatial Environmental Mapping System (GEMS). Visit GEMS, at <https://gems.lm.doe.gov>, for interactive access to environmental data for each of our active sites.

We also stay involved by participating in public meetings and other community forums to answer questions and update the public on current site conditions and issues.

THE OFFICE OF LEGACY MANAGEMENT IS RESPONSIBLE FOR 100 SITES AS OF OCTOBER 2019

DOE Office of Legacy Management

Atomic energy research and production activities began with the Manhattan Project during World War II and continued through the pursuit of nuclear weapons and atomic energy during the Cold War era and beyond. These activities left a legacy of environmental impacts at hundreds of sites across the United States. The U.S. Department of Energy (DOE) is the government agency responsible for addressing the negative effects of this legacy.

DOE Office of Legacy Management was created in 2003 to fulfill DOE's commitment to protect public health and the environment at legacy sites. Numerous sites and tens of thousands of acres of land have been, and will be, transferred to the Office of Legacy Management for long-term care after environmental cleanup has been completed under other programs.

As of October 2019, we oversee 100 sites in 28 states and Puerto Rico, working with other federal programs, state and local agencies, tribes, interest groups, and citizens.
