DATE: April 4, 2003

REPLY TO ATTN OF: KEP/4

SUBJECT: Supplement Analysis for the Transmission System Vegetation Management Program FEIS (DOE/EIS-0285/SA-142- KeelerOregon City #2)

TO: Mark Newbill
Natural Resource Specialist– TFE/Chemawa

**Proposed Action:** Vegetation Management for the Keeler-Oregon City #2 115 kV transmission line from Keeler Substation to Oregon City Substation. Includes 5 miles of the St. Johns-Oregon City #2 69 kV transmission line.

**Location:** The project is located in the BPA Eugene Region, Washington County, Oregon.

**Proposed by:** Bonneville Power Administration (BPA).

**Description of the Proposal:** BPA proposes to remove unwanted vegetation via hand cutting along the right-of-way, access roads, switch platforms, microwave beam paths, and around tower structures of the subject transmission line corridor that may impede the operation and maintenance of the identified transmission lines. BPA plans to conduct vegetation control with the goal of removing tall growing vegetation that is currently or will soon be a hazard to the transmission line. BPA’s overall goal is to have low-growing plant communities along the rights-of-way to control the development of potentially threatening vegetation.

**Analysis:** Please see the attached checklist for the resources present. Applicable findings and mitigation measures are discussed below.

**Planning Steps:**

1. **Identify facility and the vegetation management need.**

   Work will take place along the Keeler-Oregon City #2 115 kV transmission line rights-of-way for “on” right-of-way control and access road clearing of noxious weeds and tall growing species. The proposed treatment will be performed in designated areas along the ROW’s with an easement width of 100 feet. See attached checklist and documents for exact locations of treatment within the corridor.

2. **Identify surrounding land use and landowners/managers and any mitigation.**

   The project corridor passes through a variety of land ownerships and land uses including: light industrial/commercial, urban residential, city parks, City of Beaverton, commercial Holly tree farms, and City of Tualatin. Landowners requiring notification or under tree and brush agreements are shown in Section 2.4 of the attached checklist.
Any remaining landowners will be contacted (letters, personal contact, door hangers, etc.) by BPA before and during the project. Any input received will be incorporated into the prescription/cut sheets.

3. **Identify natural resources and any mitigation.**

Section 3 of the attached checklist identifies the natural resources present in the area of the proposed work. The following resources found along with applicable mitigation measures:

**Riparian Habitat:**

Riparian habitat includes rivers, wetlands, streams, and creeks meeting the definition of riparian habitat. Many areas were identified for this project. Sit specific requirements for work around these resources, including buffers are contained in Section 3.1 of the attached checklist.

**Irrigation sources, Wells, and Springs:**

No known irrigation sources, wells, or spring were identified in the project area.

**Threatened and Endangered Species/Essential Fish Habitat (EFH):**

No threatened or endanger species/EFH were identified in the project area.

**Visually Sensitive Areas:**

Several areas were identified where the project crosses roadways. Vegetation management methods and mitigation measures were specifically developed for each area. The measures are summarized in Section 3.5 of the attached checklist.

**Cultural Resources:**

No known cultural resources are present through out the project area. The project does not include any ground disturbance areas. In the event that project activities unearth or discover any cultural/historic or prehistoric materials, work will cease immediately; and will not resume until a professional archaeologist has evaluated the site.

4. **Determine vegetation control and debris disposal methods.**

Mechanical removal of vegetation will be accomplished using various methods with debris being scattered to prevent increased fire hazards. Chipping, lop and scatter, and mulching are the three methods that will be used for debris disposal (see Section 4 and 5).

5. **Determine revegetation methods, if necessary.**

Re-vegetation is not necessary for this project. In mowing areas, the mowers will cut slightly above grade. This prevents erosion and stimulates native grass.

6. **Determine monitoring needs.**

Monitoring will occur in the form of inspection while work is being done in the area. When convenient, subsequent monitoring will occur by the Natural Resource Specialist and TLM crew. Helicopter patrols (3 times/year) and working patrols (yearly) will also keep the NRS updated on problem areas.
7. **Prepare appropriate environmental documentation.**

**Findings:** This Supplement Analysis finds that 1) the proposed actions are substantially consistent with the Transmission System Vegetation Management Program FEIS (DOE/EIS-0285) and ROD, and; 2) there are no new circumstances or information relevant to environmental concerns and bearing on the proposed actions or their impacts. Therefore, no further NEPA documentation is required.

Vegetation Management Checklist
1. IDENTIFY FACILITY AND THE VEGETATION MANAGEMENT NEED

1.1 Describe Right-of-way.

<table>
<thead>
<tr>
<th>Corridor Name</th>
<th>Corridor Length &amp; kV</th>
<th>Easement width</th>
<th>Miles of Treatment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Keeler-Oregon City #2 (Includes St.</td>
<td>17 miles and 115 Kv</td>
<td>100 feet</td>
<td>5/2 – 11/1 &amp; 20/1-22/12</td>
</tr>
<tr>
<td>Johns- Oregon City #2)</td>
<td>5 miles and 69 Kv</td>
<td>100 feet</td>
<td>1/1 – 5/1 managed by Ross</td>
</tr>
<tr>

<td></td>
<td>11/1-20/1 managed by PGE per lease agreement</td>
</tr>
</tbody>
</table>

The vegetation control method used on the Right-of-Way (ROW) will be hand cutting. Topping, side-liming, and pruning trees off ROW trees will be used in urban areas.

The project will include Switch platforms, Danger Trees, or microwave beam paths.

1.2 Describe the vegetation needing management.

See handbook — List of Vegetation Types, Density, Noxious Weeds for checkboxes and requirements.

Vegetation type: Douglas-fir, Wild Cherry, Cedar, Cottonwood, Big leaf Maple, Ash, Red Alder, Pine and many varieties of Fruit and Ornamental trees

Low Density (0-50 stems per acre)

Noxious weeds: Blackberries, Tansy Ragwort and Scotch Broom.

1.3 List measures you will take to help promote low-growing plant communities. If promoting low-growing plants is not appropriate for this project, explain why. See Handbook — for requirements and checkboxes.

Removing small fir trees and hardwoods allows grass and small shrubs to expand. Many areas are in private residence (backyard) or City parks and LGPC is not the goal.

1.4 Describe overall management scheme/schedule.

See Handbook - Overall Management Scheme/Schedule.

Initial entry – Cut and or prune trees back a safe distance from the line. Summer treatment after growth and dry weather conditions. Crews will use bucket trucks or climb trees and chip all debris. This is an urban Forestry operation. No chemicals will be used do to the high urban population and Residential nature of the line.

Subsequent entries – Return every year or every two years to trim trees as needed to maintain safe distance from tree to conductor.

Future cycles – Try to achieve a 2-year trimming cycle.

2. IDENTIFY SURROUNDING LAND USE AND LANDOWNERS/MANAGERS

2.1 List the types of landowners and land uses along your corridor.

Light Industrial / Commercial
Urban Residential
City of Beaverton
2.2 Describe method for notifying right-of-way landowners and requesting information (i.e., doorhanger, letter, phone call, e-mail, and/or meeting). Develop landowner mail list, if appropriate.
Every landowner is sent a Letter notifying them of the scope and timetable for the Project. Letters will be sent out 2 weeks prior to start date.

2.3 List the specific land owner/landuse measures — determined from the handbook or through your consultations with the entities — that will be applied.
See handbook — Requirements and Guidance for Various Landowners/Uses for requirements and guidance, also Residential/Commercial, Agricultural, Tribal Reservations, FS-managed lands, BLM—managed lands, Other federal lands, State/Local Lands.

<table>
<thead>
<tr>
<th>Span</th>
<th>Landowner/use</th>

<td>Nike manages vegetation on their property</td>
</tr>
<tr>
<td>20/3</td>
<td>Show Horses</td>
<td>Hand cut only, contract owner before any action</td>
</tr>
</tbody>
</table>

2.4 Review any existing landowner agreements (e.g. tree/brush Permits or Agreements). List in table above any provisions that need to be followed and where they are located.
See handbook — Landowner Agreements for requirements.

2.5 List any known casual informal use of the right-of-way by non-owner publics. List any constraints or measure’s to take due to the informal use.
See handbook — Casual Informal Use of Right-of-way for requirements.
None known

2.6 List other potentially affected people, agencies, or tribes (that are not landowners/managers) that need to be notified or coordinated with. Describe method of notification and coordination.
See handbook — Other Potentially Affected Publics for requirements and suggestions.
None known
3. IDENTIFY NATURAL RESOURCES

See Handbook — Natural Resources

3.1 List any water resources (streams, rivers, lakes, wetlands) that may be impacted by vegetation control activities. For each water body describe the control methods and requirements or mitigation measures that will be used.

See Handbook — Water Resources for requirements for working near water resources including buffer zones.

<table>

3.2 If planning to use herbicides, list locations of any known irrigation source, wells, or springs (landowners maybe able to provide this info if requested).

See Handbook — Herbicide Use Near Irrigation, Wells or Springs for buffers and herbicide restrictions.

Herbicides will not be used.

3.3 List below the areas that have Threatened or Endangered Plant or Animal Species and the name of the species, and any special measures that need to be taken due to their presence.

Attach any BAs, T&E maps, or letters from US Fish and Wildlife.

See Handbook — T&E Plant or Animal Species for requirements and determining presence.

None Known
3.4 List any other measures to be taken for enhancing wildlife habitat or protecting species.
See Handbook — Protecting Other Species for requirements.
Small shrubs will be left for bird habitat

3.5 List any visually sensitive areas and the measures to be taken at these areas.
The line criss-crosses City Streets, County Roads, and US Highways. Trees will be topped or left if adequate clearance exists. All woody debris will be chipped back 50 feet from the blacktop. Locations of road crossings are listed below.

<table>
<thead>
<tr>
<th>Span</th>
<th>Describe sensitivity</th>
<th>Method/mitigation measures</th>
</tr>
</thead>
<tbody>
<tr>
<td>7/2</td>

<td>Top or trim trees as needed. Clean-up debris</td>
</tr>
</tbody>
</table>

3.6 List areas with cultural resources and the measures to be taken in those areas.
See Handbook — Cultural Resources for requirements.
None Known
No known cultural resources present. No ground-disturbing activity will occur. If evidence is found of cultural resource (artifacts, features, burial sites), work will cease immediately and appropriate authorities will be contacted.

3.7 List areas with steep slopes or potential erosion areas and the measure and methods to be applied in those areas.
See Handbook — Steep/Unstable Slopes for requirements.
The project area is primarily flat (<10 %). In a few remote locations (>10 %), hand cutting will be the only method used.

<table>
<thead>
<tr>

</tbody>
</table>

5. DETERMINE DEBRIS DISPOSAL AND REVEGETATION

5.1 Describe the debris disposal methods to be used and any special considerations.

See Handbook — Debris disposal for a checkbox list and requirements.

All limbs and woody debris generated from manual cutting will be chipped and hauled away from the site. That includes all street, road, highway, and railway crossings.

5.2 List areas of reseeding or replanting (those areas not already described in steps 1, 2, or 3).

See Handbook — Reseeding/replanting for requirements.

None planned, open sunlight and naturally disturbed areas enhance native grasses to flourish. Sufficient native plants already exist. In mowing areas, the mowers cut slightly above grade. This prevents erosion and stimulates existing grass. Seeding is not needed.

5.3 If not using native seed/plants, describe why.

N/A

5.4 Describe timing and any follow-up that will need to take place to ensure germination/success of seeding/planting.

N/A
6. DETERMINE MONITORING NEEDS

See handbook — Monitoring for requirements.

6.1 Describe the follow-up/monitoring cycle that will be used to evaluate the effectiveness of the vegetation control methods used.

NRS will be on site 1 day per week during the project. After 2 months, NRS will make a site visit to evaluate control and plan follow-up treatments.

TLM makes annual ground patrol. BPA helicopters patrol 3 times a year.

6.2 Describe any follow-up or monitoring needed to determine if mitigation measures were effective.

If mitigation was put in place, on site visit will be conducted to monitor. Otherwise no mitigation is expected.

7. PREPARE APPROPRIATE ENVIRONMENTAL DOCUMENTATION

See handbook — Prepare Appropriate Environmental Documentation for requirements. Also prepare Supplement Analysis — Supplement Analysis — for signature.

7.1 Describe any potential project impacts or project work that are different than those disclosed in the Transmission System Vegetation Management Program EIS. Describe how those differences impact natural resources and if the differences are “substantial”.

None, Project is consistent with EIS.

7.2 Is there a need for additional NEPA documentation (i.e. Forest Service requirement, Record of Decision, supplemental EIS)? If so, attach.

None
